**EA 815/2**  
Active telephone hybrid

## PRODUCT INFORMATION

The EA815/2 is a simple, though very high quality, analogue telephone hybrid.

The hybrid has a built-in limiter and bandpass filter and can be used in combination with analogue telephone lines (POTS). Voice Control is used together with preset balance, to achieve the best damping of the send signal. The unit has balanced line in- and outputs on XLR-type connectors and Opto isolated remotes on a D-9 connector. The send and receive gain is adjustable through the front panel. The latest version comes with a wide range power adaptor: (100..240Volts, 50/60 Hz).

Special 19" rackmount brackets are available for 1 or 2 units.

Please contact your local EA dealer for more information about Eela Audio products.
