EA 915x
DSP telephone hybrid

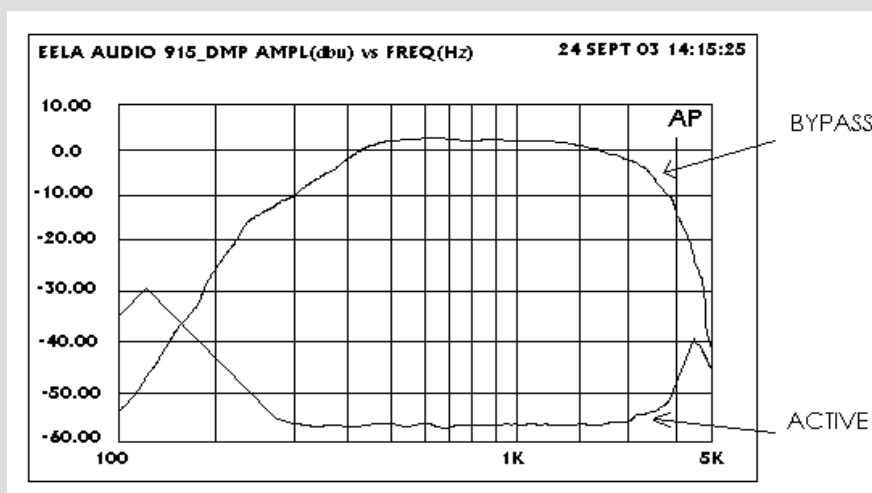

PRODUCT INFORMATION

The EA915x is the interface between an audio mixer and an analogue telephone line, providing the highest possible quality and reliability. The EA915x uses an Analog Devices DSP2181 Digital Signal Processor to reduce the crosstalk. With the latest algorithm and software a damping of the return signal of > 50 dB at normal operation level can be achieved. It also performs the update function in milliseconds.

This hybrid has a balanced line input and output on XLR type connectors and a remote control input to control it directly from an audio mixing console such as the Eela Audio mixing consoles.

The unit is standard 19" 1 U.

Please contact your local EA dealer for more information about Eela Audio products.
