## THE EELA S20A REPORTOPHONE

The S20A Reportophone (The Original!) is an easy to use, full function radio reporter telephone unit for POTS telephone lines. With thousands of units sold all over the world it's known as the radio reporters "Swiss Army knife".

Just connect a studio microphone, a pair of headphones and the telephone line and dial up your studio for a studio link with maximum audio quality.

It has a built-in mixer with inputs for microphone and line as well as a line output for recording. All audio connections are balanced and filtered against HF pick up.

High signal quality is achieved by using dedicated signal processing (mixing, equalizing and compression) to make optimal use of the available bandwidth without overload or low levels. This provides the studio with an exceptionally good sound quality with a minimum of noise and distortion.

All normal telephone functions are available including tone or pulse dialing, a built-in buzzer enables incoming call reception.

The housing is a heavy-duty metal case. Neutrik connectors are used for audio connections, locked XLR (MIC) and 1/4" Jack (HPH) avoids accidentally unplugging.

Specifications:  
Weight: approx. 2,4 kg incl. case + accessories.  
Dimensions (w x h x d): 180x 50 x 190 mm.  
Battery or mains operation.  
The S20A comes in attractive case.
