Reportophone

THE EELA S24 REPORTOPHONE

The S24 Reportophone is an easy to use, battery or mains powered, full function radio reporter telephone unit for POTS telephone lines. It can be used with 2 reporters or a reporter and a guest each with their own microphone and headphone.

It has a built-in mixer with inputs for 2 microphone and one microphone / line as well as a line output for recording. The two high level headphone monitor outputs provide good communication with the studio even in noisy environments. All audio connections are balanced and filtered against HF pick up. In all cases soft keys act as pushbuttons for sending talkback to an output.

The built-in LCD display and the soft keys together with the menu structured working modes keep the operation clear and simple.

High signal quality is achieved by using dedicated signal processing (mixing, equalizing and compression) to make optimal use of the available bandwidth without overload or low levels.

All normal telephone functions are available including tone or pulse dialing, a built-in buzzer enables incoming call reception. The S24 can also be used in "Local Battery" mode.

The housing is a heavy-duty metal case. Neutrik connectors are used for audio connections, The third input can be switched mic./line.

Specifications:

Weight: approx. 3,6 kg incl. case + accessories.

Dimensions (w x h x d): 210x 60 x 210 mm.
